

Tatt2Away POST-Treatment Instructions

Please read the following carefully and ask your practitioner questions about any aspect of the Tatt2Away procedure you do not understand.

Aftercare of the skin is of vital importance and must be followed rigidly to ensure the pigments are properly expelled, and for the area to heal properly. It will take some time for the skin to fully regain its normal pigment, In the meantime you will need to look after your skin sensibly and follow the advice given by your practitioner.

Immediately after your treatment

- A medicated gel will be applied to the treated area and covered with gauze
- This gauze should remain on the treated area for a minimum of 12 hours, and up to 24 hours before being removed
- AVOID ALL SOAPS, CLEANERS, CHEMICALS for at least 48 hours
- Rinse gently with warm water and clean hands, and gently dab dry with clean gauze, taking care not to disturb the scab.

After 48 Hours

- You may gently cleanse the treated area with a mild antibacterial soap, but avoid those with strong perfume.
- Rinse gently with warm water and clean hands, and gently dab dry with a clean towel or gauze, taking care not to disturb the scab.

Over the Next 3 – 20 Days

Expect the area to feel sore, and look red and inflamed, for the first few days

The treated areas will form small scabs, which will drop off after 3-20 days.

Expect itchiness and dryness during this period – DO NOT scratch, or use any creams. Keep it dry. Cover the area to reduce irritation from clothing moving against and catching the scabs.

Secondary scabs may form after the initial scabs have fallen away.

Things to Avoid whilst scabs are present

- AVOID restrictive or tight clothing.
- DO NOT soak the treated area in a bath, swimming pool, ocean, lake or hot tub.
- DO NOT expose the treated area to the full pressure of the water in a shower.
- DO NOT rub or pick at the scabs. Correct formation of the scab is critical to the success of the removal process. The scabs should be allowed to flake off on their own. There should be absolutely no scrubbing of the area or use of cleansing creams or chemicals.
- DO NOT expose the treated area to the sun. *When the skin is fully healed, use a total sun block product to prevent incorrect pigmentation of the treated skin.*
- DO NOT resume any method of hair removal in the treated are for 1 week after the procedure

IMPORTANT NOTE:

It is vitally important for you to attend your follow up session (around week 2 or 3) so that we can check the healing process, and for you to get your silicone patch. This is an essential element of the process and helps to minimise scarring.

Failure to follow post-treatment instructions will reduce the effectiveness of the treatment. Final results cannot be determined until healing is complete.

IF YOU HAVE ANY QUESTIONS PLEASE FEEL FREE TO CALL.
